SCOPUS

Author search

[Compare sources](#) >

i To determine which author names should be grouped together under a single identifier number, the Scopus Author Identifier uses an algorithm that matches author names based on their affiliation, address, subject area, source title, dates of publication, citations, and co-authors. Documents with insufficient data may not be matched, this can lead to more than one entry in the results list for the same author. By default, only details pages matched to more than one document in Scopus are shown in search results. [About Scopus Author Identifier](#)

This author's h -index

The h -index is based upon the number of documents and number of citations.

28

Indico l'arco temporale per il quale voglio eseguire la mia ricerca, ad es, ultimo decennio: dal 2008 al 2018
Clicco quindi su *update graph*

È possibile anche ricavare l' h -index senza auto-citazioni cliccando su *exclude self citations*
